CONTENTS

NUMBER 1

Editorial	J. R. RADFORTH: New review procedures and guidelines for authors	1
	N. W. RADFORTH: Stig A.K. Areskoug: Sense of mission	3
State-of-the-Art Reports	D. A. CROLLA and H. SCHWANGHART: Vehicle dynamics—Steering I	7
	H. SCHWANGHART and D. A. CROLLA: Vehicle dynamics—Steering II	19
	H. FUJII: Problems between soil and construction machinery with special reference to field compaction	35
Selected Papers	W. EHLERT, B. HUG and I. C. SCHMID: Field measurements and analytical models as a basis of test stand simulation of the turning resistance of tracked vehicles.	57
	H. MURAKAMI, K. WATANABE and M. KITANO: A mathematical model for spatial motion of tracked vehicles on soft ground . . .	71
	D. A. CROLLA and A. M. A. ABOUEL NOUR: Power losses in active and passive suspensions of off-road vehicles.	83
	A. BOCCAFOGLI, G. BUSATTI, F. GHERARDI, F. MALAGUTI and R. PAOLUZZI: Experimental evaluation of cutting dynamic models in soil bin facility	95
	S. SHIBUSAWA: Fractals in clods formed with rotary tillage	107
	Y. HATAMURA and T. HANAMOTO: Development of a three-directional stress cell and measurement of stress distribution on a backhoe bucket . .	117
	T. TAMURA and T. SAKAI: Measurement of the degree of compaction by the impedance method	125
	T. MURO: Estimation of wear life of wheel loader tyre	137
Technical Article	G. RAJARAM and A. OIDA: Deformation of sand caused by tine implements	149

CONTENTS (continued)

NUMBER 2

Technical Articles

S. SHIBUSAWA and A. OIDA: Transient load test system for evaluating dynamic soil behavior hierarchies by differences in the period of motion 161

E. CANILLAS, V. M. SALOKHE and D. GEE-CLOUGH: Performance of coated floats in different soils 173

A. V. MIROSHNICHENKO, S. L. SITNIKOV, V. N. MEHANUK and V. I. JASKIV: Tasks of mathematical description and experimental modelling of the process of vehicle–soil interaction 187

T. NIYAMAPA, K. NAMIKAWA and V. M. SALOKHE: Soil failure under undrained quasi-static and high speed triaxial compression test 195

J. A. LINES and R. O. PEACHEY: Predicting the ride vibration of a simple unsuspended vehicle 207

R. A. MCBRIDE and N. BAUMGARTNER: A simple slurry consolidometer designed for the estimation of the consistency limits of soils . . . 223

J. C. LARMINIE: Modifications to the mean maximum pressure system 239

J. G. HETHERINGTON: The use of scale model tests to verify earth anchor design predictions 257

J. Y. WONG and G. J. IRWIN: Measurement and characterization of the pressure–sinkage data for snow obtained using a Rammsonde . . . 265

Discussion

E. MCKYES: Investigation of the relationship between soil–metal friction and sliding speed; YAO YUSU and ZENG DECHAO . . . 281

YAO YUSU and ZENG DECHAO: Authors' Reply 283

Book Review

Mechanics of Transportation, by A. ORLANDI, Reviewed by G. RIGAMONTI 287

CONTENTS (continued)

NUMBER 3

Technical Articles

S. SHIBUSAWA and A. OIDA: Dependency of observation parameters on soil dynamic parameters in unconfined impact compression tests 289

J. A. LINES, R. O. PEACHEY and T. S. COLLINS: Predicting the ride vibration of an unsuspended tractor using the dynamic characteristics of rolling tyres 307

ZENG DECHAO and YAO YUSU: A dynamic model for soil cutting by blade and tine . . . 317

V. M. SALOKHE and A. GHAZALI: The effect of a float on power tiller performance. . . 329

J. Y. WONG: Expansion of the terrain input base for Nepean Tracked Vehicle Performance Model, NTVPM, to accept Swiss Rammsonde data from deep snow 341

Discussion

M. M. PONCYLIUSZ: Establishment of soil–mechanical parameters which determine traction on deforming soil; G. KOMANDI . . . 359

G. KOMANDI: Author's Reply. . . . 361

NUMBER 4/5

Technical Articles

V. M. SALOKHE, WU MING and D. GEE-CLOUGH: Effect of enamel coating on boat hull drag . 363

G. KOMANDI: On the mechanical properties of soil as they affect traction 373

R. ALCOCK and V. WITTIG: An empirical method of predicting traction 381

J. Y. WONG: Computer-aided methods for the optimization of the mobility of single-unit and two-unit articulated tracked vehicles . . 395

YU QUN, SHEN JIE and DAI XIANBIN: Camera tracing and image processing system for soil deformation 423

CONTENTS (continued)

D. Wulfsohn and S. K. Upadhyaya: Determination of dynamic three-dimensional soil–tyre contact profile 433

Y. Ooishi, S. Murakawa, A. Hatakoshi and T. Mori: Development of discharged soil measuring device for shield tunneling machines 465

D. M. Xu, A. M. O. Mohamed, R. N. Yong and F. Caporuscio: Development of a criterion for road surface roughness based on power spectral density function 477

A. V. Miroshnichenko, V. N. Mehanuk and V. I. Yaskiv: Development of a system to study the influence of deformation velocity on the soil reaction related to the interaction with the vehicle 487

Chun Qi Zheng, Shin-Min Song and G. E. O. Widera: Foot force distribution of walking machine with consideration of terrain properties 497

N. K. Awadhwal and C. P. Singh: Puddling effects on mechanical characteristics of wet loam soil 515

NUMBER 6

Technical Articles

K. Sakai, M. Takai and S.-I. Hata: Theoretical analysis of a wheel driven root crop harvester . 523

D. Wulfsohn and S. K. Upadhyaya: Prediction of traction and soil compaction using three-dimensional soil–tyre contact profile 541

T. Muro: Traffic performance of a rubber-tracked vehicle travelling up and down a sloped pavement 565

D. Pietzsch and W. Poppy: Simulation of soil compaction with vibratory rollers 585

A. Grečenko: The Slip and Drift Model of a wheel with tyre compared to some other attempts in this field 599
